Subject: microsoft settlement

Microsoft has been providing the most user friendly operating system for the last 10 or so years. They are able to provide that service to the consumers due to the fact that they continue to be a predatory company. They feed and prey on smaller companies that aid in the movement of open source Gnu/GPL. I for one have noticed this practice increase in intensity and frequency ever since the Linux operating system has gained popularity. Which is poised to steal a good portion of the market share in the next few years. I believe that Microsoft is a monopoly and hope that they get dealt with accordingly, by law.

Thanks.
